## INCREASED DOMESTIC CHEMICAL PRODUCTION IN YUGUSLAVIA WILL PERMIT EXPORT OF CERTAIN PRODUCTS SOON

CELLULOSE FACTORY GETS 2 MORE BOILERS -- Ljubljana, Slovenski Porocevalec, 8 Mar 51

The fourth and fifth boiler in the cellulose factory in Prijedor were completed recently. The fourth boiler has been in operation for the past 14 days, while the fifth boiler was placed in operation on 5 March 1951. Now that the fifth boiler is in operation the factory will be able to increase production 40 percent.

When all the installations are completed and the factory is operating at full capacity, it will produce 36,000 tons of cellulose per year. The factory already satisfies the needs of Yugoslav paper factories for sulfite cellulose. When the cellulose factory in Doboj is completed, Yugoslavia will no longer import caustic-soda cellulose.

With the fourth and fifth boiler operating, the cellulose factory in Prijedor will produce so much sulfite cellulose that it will be able to export some to Italy soon.

TO PRODUCE NEW CHEMICALS -- Sarajevo, Oslobodjenje, 19 Mar 51

Jajce, 18 March -- New equipment will be installed this year in the "Elektrobosna" Factory to facilitate the production of chemically pure merticuric chloride, a pest-killer; mercury oxide, which is used in medicine; anhydrous metal oxide, which is used in the dye, petroleum, and medicine industry; and chloroform. Some quantities of the first two chemicals will be exported. All four chemicals were previously imported.

The new equipment for the factory will be furnished by the "Jedinstvo," "Rade Koncar," and "Djuro Djakovic" enterprises.

MATCH PRODUCTION INCREASES -- Ljubljana, Slovenski Porocevalec, 3 Apr 51

The Drava" Match Factory in Osijek produced 20 million more boxes of matches during the first quarter of 1951 than during the same period of 1950. It is estimated that the factory will soon produce 100,000 poxes of matches per day for export. The factory will begin to export matches in April 1951.
